the anthropocene is the age of human influence an epoch well known for its urban impact more than half of all people already live in cities and this proportion is expected to rise to almost 70 percent by 2050 like other species in urban areas bats must contend with the pressures of profound and irreversible land cover change and overcome certain unique challenges such as the high density of roads lights glass and free ranging domestic animals research on urban bats in recent decades indicates that when it comes to urban life some bats are synanthropes in other words although most species of bats are negatively impacted by urbanisation many appear to not only succeed but also thrive in cities and towns this observation has inspired interesting questions about bats in relation to urbanisation which traits and behaviours equip bats for urban success what features of urban areas increase the likelihood that bats will successfully persist there or even colonize new areas and how does the success of urban bats affect co habiting humans our book explores the interactions between bats and urban environments through case studies and reviews understanding how different species interact with urban environments can reveal potential opportunities to mitigate urban threats to bats and threats posed by bats to other urban organisms including humans with this book we thus aspire to provide a knowledge base to help guide current and future efforts to conserve bats

what motives underlie the ways humans interact socially are these the same for all societies are these part of our nature or influenced by our environments over the last decade research in experimental economics has emphatically falsified the textbook representation of homo economicus literally hundreds of experiments suggest that people care not only about their own material payoffs but also about such things as fairness equity and reciprocity however this research left fundamental questions unanswered are such social preferences stable components of human nature or are they modulated by economic social and cultural environments until now experimental research could not address this question because virtually all subjects had been university students and while there are cultural differences among student populations throughout the world these differences are small compared to the full range of human social and cultural

environments a vast amount of ethnographic and historical research suggests that people's motives are influenced by economic social and cultural environments yet such methods can only yield circumstantial evidence about human motives combining ethnographic and experimental approaches to fill this gap this book breaks new ground in reporting the results of a large cross cultural study aimed at determining the sources of social non selfish preferences that underlie the diversity of human sociality the same experiments which provided evidence for social preferences among university students were performed in fifteen small scale societies exhibiting a wide variety of social economic and cultural conditions by experienced field researchers who had also done long term ethnographic field work in these societies the findings of these experiments demonstrated that no society in which experimental behaviour is consistent with the canonical model of self interest indeed results showed that the variation in behaviour is far greater than previously thought and that the differences between societies in market integration and the importance of cooperation explain a substantial portion of this variation which individual level economic and demographic variables could not finally the extent to which experimental play mirrors patterns of interaction found in everyday life is traced the book starts with a succinct but substantive introduction to the use of game theory as an analytical tool and its use in the social sciences for the rigorous testing of hypotheses about fundamental aspects of social behaviour outside artificially constructed laboratories the results of the fifteen case studies are summarized in a suggestive chapter about the scope of the project
