## **Android Tips, Tricks, Apps & Hacks Volume 2**

2019-08-29

this book constitutes the thoroughly refereed post conference proceedings of the 22nd international conference on financial cryptography and data security fc 2018 held in nieuwport curacao in february march 2018 the 27 revised full papers and 2 short papers were carefully selected and reviewed from 110 submissions the papers are grouped in the following topical sections financial cryptography and data security applied cryptography mobile systems security and privacy risk assessment and management social networks security and privacy and much more

### **Financial Cryptography and Data Security**

2019-08-02

wind turbines and aerodynamics energy harvesters not only presents the most research focused resource on aerodynamic energy harvesters but also provides a detailed review on aeroacoustics characteristics the book considers all developing aspects of 3d printed miniature and large size savonious wind harvesters while also introducing and discussing bladeless and aeroelastic harvesters following with a review of off shore wind turbine aerodynamics modeling and measurements the book continues the discussion by comparing the numerical codes for floating offshore wind turbines each chapter contains a detailed analysis and numerical and experimental case studies that consider recent research design developments and their application in practice written by an experienced international team in this cross disciplinary field the book is an invaluable reference for wind power engineers technicians and manufacturers as well as researchers examining one of the most promising and efficient sources of renewable energy offers numerical models and case studies by experienced authors in this field contains an overview and analysis of the latest research explores 3d printing technology and the production of wind harvesters for real applications includes and uses ansys fluent case files

### **Wind Turbines and Aerodynamics Energy Harvesters**

2021-03-21

this book provides an in depth overview of artificial intelligence and deep learning approaches with case studies to solve problems associated with biometric security such as authentication indexing template protection spoofing attack detection roi detection gender classification etc this text highlights a showcase of cutting edge research on the use of convolution neural networks autoencoders recurrent convolutional neural networks in face hand iris gait fingerprint vein and medical biometric traits it also provides a step by step guide to understanding deep learning concepts for biometrics authentication approaches and presents an analysis of biometric images under various environmental conditions this book is sure to catch the attention of scholars researchers practitioners and technology aspirants who are willing to research in the field of ai and biometric security
