of the theoretical foundations of operational logistics oplog and its applications the theoretical foundations are examined with regard to two dimensions first the artistic or qualitative aspects of contemporary logistics are looked at in the context of the operational level of war these oplog aspects include principles imperatives and tenets which are stated and analyzed the second dimension relates to the scientific aspects of logistics it is manifested by a formal network model that represents the structural and operational features of an oplog system hence the book examines both artistic and scientific dimensions of military logistics and integrates the respective qualitative and quantitative aspects into a unified and definitive presentation of operational logistics chapter 1 presents a general introduction to military logistics chapter 2 discusses the general structure and characteristics of logistics and describes its three levels strategic operational and tactical chapter 3 focuses on operational logistics oplog chapter 4 deals with the logistics planning process chapter 5 addresses the issue of logistics information chapter 6 deals with forecasting logistics demands chapter 7 introduces the first version of the logistics network model chapter 8 addresses an important property of an oplog system flexibility chapter 9 discusses two major and dual issues in oplog practice force accumulation and medical treatment and evacuation chapter 10 presents an inter temporal network optimization model that is designed to determine deployment and employment of the support chain in an oplog system
