in 2001 no child left behind introduced the highly qualified status for k 12 teachers which mandated the successful scores on a series of high stakes test within this series is the pre professional skills test ppst or praxis i the ppst measures basic k 12 skills for reading writing and mathematics the mathematics sub test is a national concern because some american high school students may graduate with basic math skills deficits that may prohibit their performance on the ppst one approach to understanding this national concern is to explore the ppst preparation materials this study focused on the numbers and operations algebra geometry and measurement and data analysis and probability categories found within the study guide questions and test questions to statistically address the categorical reading ease and grade

level means for the ppst study guide basic math skills questions and the ppst basic math skills test questions the purpose of this study was to analyze the effectiveness of the ppst study guide questions when compared to the ppst basic math skills test questions the math test was selected because on the reading grammar and math portions of the ppst basic skills test across demographic groups tested the math score is reflective of lower scores earned to enhance learning it is hypothesized that study guide questions should be more complex than test questions are this hypothesis is based upon low road transfer of knowledge and high road transfer of knowledge involving only ets questions the one way anova and scheffe method examined this theory the sample consisted of 320 questions 200 questions were eliminated because of duplication and 10 questions were removed due to categorical contamination one hundred and ten questions remained in the study the statistical results revealed no significance differences between the study guide questions and the test questions for numbers and operations algebra and geometry and measurement the data analysis and probability questions were eliminated statistical evidence supports the position that a low road knowledge of transfer exist between the ppst math study guide questions and the ppst basic math skills test questions
