Anti-Fertility Plants of the Pacific

1997-01-01

there is a growing appreciation of traditional medical systems as a source of considerable knowledge of the medicinal properties of plants traditional medicines have the potential to offer leads to identifying potentially valuable chemicals that can be developed into new and more effective drugs including safer contraceptives the pacific region is an excellent arena in which to search for such chemicals as the area contains plant species not found elsewhere there is every indication that many of the plants used more generally in traditional pacific medicine may be efficacious of 74 plants surveyed in one study 86 showed pharmacological activity and in many pacific traditions knowledge of medicinal use is transmitted between generations as part of an inherited body of ethnomedical knowledge this book documents all the available information on plants that have been used traditionally for anti fertility and fertility purposes in the pacific region and indicates which of these plants hold the most promise for providing new anti fertility agents it also records instances in which the plant has been used outside the region

How Indians Use Wild Plants for Food, Medicine & Crafts

1974

learn the natural ways of the chippewa indians with this great book from dover texas kitchen and garden and more the uses of plants for food for medicine for arts crafts and dyeing among the chippewa indians of minnesota and wisconsin show the great extent to which they understood and utilized natural resources in this book those traditions are captured providing a wealth of new material for those interested in natural food natural cures and native crafts in separate sections describing the major areas of use miss densmore an ethnologist with the smithsonian institution details the uses of nearly 200 plants with emphasis on wild plants and lesser known uses for those interested in natural foods she gives extensive coverage to the gathering and preparation of maple sugar and wild rice as well as preparations for beverages from leaves and twigs of common plants seasonings including mint and bearberry the methods of preparing wild rice and corn cultivated and wild vegetables and wild fruits and berries on indian medicines she tells the basic methods of gathering plants and the basic surgical and medical methods then she gives a complete list of the plants with their botanical names uses parts used preparation and administration and other notes and references also covered are plants used as charms plants used in natural dyes and plants in the useful and decorative arts including uses for household items toys mats twine baskets bows and tools with special emphasis on the uses of birch bark and cedar this section will be especially useful for supplying new and unusual craft ideas in addition 36 plates show the many stages of plant gathering and preparation and many of the artistic uses while a number of the plants discussed are native only to the great lakes region many are found throughout a wide range those studying the indians of the great lakes region or those trying to get back to nature through understanding and using natural materials will find much about the use of plants in all areas of community life because of miss densmore s deep knowledge and clear presentation her study remains a rich and useful source for learning about or using native foods native cures and native crafts

phytochemistry of plants
used in traditional medicine
proceedings of the
phytochemical society of
europe

~~this volume showcases current ethnobiological accounts of the ways that people use~~
 plants to promote human health and well being the goal in this volume is to
 highlight some contemporary examples of how plants are central to various aspects of
 healthy environments and healthy minds and bodies authors employ diverse analytic
 frameworks including interpretive and constructivist cognitive political ecological
 systems theory phenomenological and critical studies of the relationship between
 humans plants and the environment the case studies represent a wide geographical
 range and explore the diversity in the health appeals of plants and herbs the volume
 begins by considering how plants may intrinsically be healthful and the notion that
 ecosystem health may be a literal concept used in contemporary efforts to increase
 awareness of environmental degradation the book continues with the exploration of
 the ways in which medically pluralistic societies demonstrate the entanglements
 between the environment the state and its citizens profit driven models for the
 extraction and production of medicinal plant products are explored in terms of
 health equity and sovereignty some of the chapters in this volume work to explore
 medicinal plant knowledge and the globalization of medicinal plant knowledge the
 translocal and global networks of medicinal plant knowledge are pivotal to
 productions of medicinal and herbal plant remedies that are used by people in all
 variety of societies and cultural groups humans produce health through various means
 and interact with our environments especially plants in order to promote health the
 ethnographic accounts of people plants and health in this volume will be of interest
 to the fields of anthropology biology and ethnobiology as well as allied disciplines

A Dictionary of Plants Used by Man

1974

presents concise monographs accompanied by full colour photographs for the 150 plant
 species most commonly used for medicinal purposes in the republic of korea in view
 of the country s long and successful history in the use of traditional medicines the
 book aims to provide written and visual documentation of important plants and
 summarize their uses to treat ailments protect against disease or promote health in
 so doing the book also aims to encourage the wider use of korea s medicinal plants
 and promote their conservation each plant species is covered according to a common
 format which includes the scientific name of the plant korean name english common
 name parts used and clinical uses in traditional korean medicine also included are a
 detailed botanical description of the plant its habitat and geographical
 distribution followed by a summary of biological actions and chemical components as
 reported in the traditional medicine literature the 150 full colour photographs
 included to facilitate identification of plants and plant parts used for medicinal
 purposes were taken under natural conditions during the flowering or fruiting
 seasons retrieval of information is facilitated by the inclusion of indexes giving
 scientific names the english common names and the korean plant names

Medicinal Plants in the Republic of Korea

1998

describes the information available from both traditional medical texts and recent
 scientific studies for 102 medicinal plants used in the south pacific islands plants
 from this part of the world represent an especially diverse flora and include
 several species currently undergoing scientific investigation common traditional
 uses include the treatment of minor injuries childhood ailments and complications of
 pregnancy plants described in the book are also used as emetics and as ointments and
 dressings applied to surface wounds or used to treat skin problems addressed to
 phytochemists and pharmacologists the book aims to document
 phytochemistry of plants
 phytochemical society of europe

**phytochemistry of plants used in traditional medicine proceedings of the
phytochemical society of europe**

~~traditional clinical uses and bring these to the attention of the international~~
scientific community while also preserving knowledge about the distinctive
indigenous practices in these island communities full color photographs are included
to facilitate identification of plants and plant parts used for medicinal purposes
each plant is described according to a common format which includes information on
scientific name local names english name a description of the plant and its habitat
and distribution and a summary of what is known about its chemical constituents
biological activity and traditional uses close to 500 references to the traditional
and scientific literature are included the book concludes with a detailed index of
local names used in these islands

Medicinal Plants in the South Pacific

1998

this unique book is a collaborative effort between researchers at rutgers university
and colleagues from numerous institutions in uzbekistan and kyrgyzstan it will be
the first book to document more than 200 of the most important medicinal plants of
central asia many whose medicinal uses and activities are being described in english
for the first time the majority of the plants described grow wild in central asia
with some being endemic while other species have been introduced to central asia but
are commonly used in regional plant based medicine the book contains four
introductory chapters the first and second chapters cover the geography climate and
vegetation of kyrgyzstan and uzbekistan respectively the third chapter provides a
brief history of medicinal plant use and science in central asia and the fourth
chapter contains general information about phytochemistry the fifth chapter
comprises the bulk of the book and covers 208 medicinal plant species nearly all
species have one or more high quality color photographs three useful appendices have
been included the first is a glossary of botanical and ecological terms the second
is a glossary of chemistry terms and the third is a glossary of medical terms during
the preparation of this manuscript we found there to be a deficiency in quality
reference resources for the translation of many of the technical terms associated
with the different branches of science covered in this book in order to make our job
easier we compiled glossaries over the course of preparing the manuscript and have
included them feeling that they will be an extremely valuable resource for readers

Medicinal Plants of Central Asia: Uzbekistan and Kyrgyzstan

2016-08-23

the indian sub continent is unique in the richness of plant wealth in india 15 000
higher plant species occur of which 9 000 wild plants used by the tribals for their
requirements out of the 7 500 wild plants are used for medicinal purposes by the
tribals about 950 species found to be new claims and worthy for the scientific
investigation recent investigators showed interest on investigating about medicinal
plants and collection of folklore claims many traditional medicinal systems are
mainly using the herbs many scientists of different disciplines have paid good
attention in screening the medicinal plants used in different traditional systems so
the scientists have succeeded in exploring good number of healing agents in this
context i attempted to explain the medicinal importance of over one hundred plants
that are commonly occurring in our surroundings

there is a shift in paradigm when it comes to human health from cure to prevention we want to live a healthy life and try our best to prevent sickness instead of solely relying on pharmaceuticals for curing an illness after the fact the idea for this book came from the realization that most plant based nutraceutical products are sold without proper research based information many contributing authors of this book have highlighted the need for evidence based scientific studies to support health and nutraceutical claims relating to the use of medicinal plants and their extracts it is only through critical research efforts that we can provide strong endorsements for medicinal plant use and ensure consumer confidence in the industry much of the research published on the medicinal value of plants does not take into account variability generated from genetic differences among plants and their interaction with the environment articles in this book demonstrate the need to properly identify plants with known medicinal properties which have been grown in environments that are conducive to consistent production of the active agents attributed to the plants production of dependable medicinal produce can only be attained if we pay close attention to these research based principles this book is devoted to topics that focus on advances in research related to medicinal plants and methods available to use them and their extracts the book is truly a collaborative effort of a number of well known researchers working in north america europe australia and asia we believe that the content of the book will inspire readers to broaden their research interests and encourage more widespread use of medicinal plants in our daily diets as a proactive means of maintaining healthy and productive lives the title for the book advances in medicinal plant research was a collective decision of some of the contributing authors the readers will find a wide range of topics including medicinal properties of many crops that are grown such as oilseeds forages cereals vegetables ornamentals crops grown for fiber and native plants that are yet to be grown as crops we believe that plant researchers clinical nutritionists animal nutritionists plant breeders and students in particular will find this a valuable reference the book chapters contain reviews of research progress in medicinal and functional food aspects of cannabis echinacea fenugreek rosemary marigold native australian plants indian spices as well as the effect of plant components on human and other animal health there are chapters dealing with methods that can be used for genetic improvement of nutraceutical properties of the plants the authors have incorporated salient information from the literature as well as their personal research experiences each chapter contains an exhaustive list of references which may be of special interest to some researchers it was a pleasure for us to work with the authors and reviewers who exhibited enormous patience and professionalism during the preparation and review process of the book we offer our personal appreciation to all involved for a job well done we thank the managing editor s g pandalai and general manager n j sudarsan for bringing this book project to fruition lastly we are deeply indebted to agriculture and agri food canada and the university of lethbridge for allowing us to use time and physical resources for completing editorial duties for the book

1999

the book has been compiled to bring together comprehensive information and
literature on medicinally and commercially important plants in respect of
biosystematics reproductive biology genetic amelioration cultivation conservation
chemistry pharmacology trade value addition and future prospects for wider
readership the ten plants are aegle marmelos aloe vera saussurea costus aconitum
heterophyllum asparagus racemosus berberis aristata bergenia ciliata crocus sativus
picrorhiza kurroa and piper longum the primary motivation for writing this book was
to collate scientific information on some of the most privileged plants used in
india and to give a critical analysis of next generation research problems worth
pursuing we have identified a set of ten plants which have great potential for
safeguarding and promoting wellness and human health and possess promising potential
of product development for commerce recent global regulatory developments
exemplified by us fda creating a road map for marketing approval of plant based
botanical drugs and nutritional supplements has opened up global market for indian
medicinal plants over a hundred indian plants that have been used in traditional
systems of medicine for centuries have now been recognized and included in the
global pharmacopoeias us eu and japan in 2015 the drugs controller general of india
dcgi has created a separate category for phytopharmaceutical drugs and over 100
plants have been approved by food safety and standard authority of india fssai for
inclusion as nutritional products
