Hacking 2004

audrey hepburn is nog altijd een van de meest geliefde hollywoodsterren maar geen enkele van de over haar geschreven biografieën beschrijft haar intense ervaringen tijdens de vijfjarige bezetting van nederland tijdens de oorlog nam hepburn deel aan het verzet assisteerde ze dokters bij de slag om arnhem en maakte ze de hongerwinter van 1944 door maar de oorlogsjaren brachten ook overwinningen mee ze werd de beroemdste ballerina van arnhem audrey s eigen herinneringen interviews met bekenden dagboeken en nieuw onderzoek werpen licht op deze onbekende periode uit haar leven

A Report on Education and Training for the Motor Industry in Europe 1964

this study analyses the stringency of eu environmental regulations contrary to the proposition of an economic trading up of standards the positive theory of environmental federalism which is developed allows for an examination of political mechanisms and the effects of regulation empirical results of the study of european and national decisions in eu vehicle emission legislation allow for the conclusion that the adoption of strict rules is viable even in extreme sectoral cases where the industry concerned is economically and politically powerful the distribution of costs across the industry and eu member states is the central mechanism which provokes strict and lax rules in vehicle emission legislation systematic differences between the regulation of co2 and air pollutant emissions exist diesel particulate filters were introduced comparatively late as a result of a baptist bootlegger coalition of environmental associations and parts of the automotive industry

Agreement Concerning the Adoption of Uniform Condition of Approval and Reciprocal Recognition

of Approval for Motor Vehicle Equipment and Parts 1960

this study was commissioned by policy department a at the request of the committee of inquiry into emission measurements in the automotive sector emis it provides a comparative study on the differences between the eu and us legislation on emissions in the automotive sector covering the emissions standards themselves the systems for their implementation and enforcement including approval systems for vehicles and the respective regimes for prohibiting the use of defeat devices

Audrey Hepburn - Het Nederlandse meisje 2019-09-12

under regulation eu no 168 2013 motorcycles in the l3e a1 subcategory must be fitted with an advanced braking system consisting of either an anti lock braking system abs or a combined braking system cbs or both at the discretion of the manufacturer article 79 of regulation eu no 168 2013 requires the european commission to produce a report to the european parliament and council that notably examines the potential of making the fitment of abs mandatory for motorcycles in subcategory l3e a1 motorcycle casualty data from the eu was extrapolated for the period 2022 2032 and indicates that over that ten year period there are likely to be over a million collisions involving l3e a1 motorcycles resulting in 6 467 fatalities 212 080 serious injuries and 838 162 slight injuries cases from the road accident in depth study raids database were used to estimate the proportion of collisions that could be avoided or mitigated by the fitment of abs to motorcycles in l3e a1 87 collisions involving motorcycles in l3e a1 were reviewed of which 22 were found to have been caused completely or partially by the locking of one or both wheels of those 10 were caused by the motorcycle losing control under braking or while negotiating a bend in the road in seven cases either the front or both wheels locked in another four the rear wheel locked and in the remaining 11 cases it was known that wheel locking had occurred but it was unknown whether the front rear or both was involved these data were extrapolated to generate predictions for the likely consequences of mandating abs for all new motorcycles in l3e a1 for a ten year period beginning in 2022 a cost benefit analysis was conducted to ascertain whether the mandating of abs for motorcycles in l3e a1 would be economically beneficial for the european union a range of scenarios were tested based on historical market data current information about the rate of voluntary fitment of abs and effectiveness estimates based on the raids data analysed as part of this study in the main run of this model which used only the raids collisions in which the front or both wheels were known to have locked the cost benefit analysis showed a benefit to cost ratio of 22 79 with a predicted saving of 1 4 billion euros by 2032 and a predicted cost of

60 7 million euros a sensitivity analysis was conducted as part of the cost benefit study which showed a range of benefit to cost ratios between 18 23 and 77 12 depending on the levels of effectiveness and system cost chosen given the relatively low cost of mandating the fitment of abs to all motorcycles in l3e a1 from 2022 on and the high cost associated with even slight injuries resulting from motorcycle collisions a neutral benefit cost ratio would result from the prevention of only around 1 500 slight injury collisions less than 0 15 of the total collisions for the ten years between 2022 and 2032
