Emergency medicine attendings who wish to hone their teaching skills can find a number of books on educational strategies written by physicians from other disciplines. However, until the publication of the first edition of this book, they did not have access to a text written by emergency medicine physicians on methods of teaching that are directly applicable to teaching them. This book was compiled to meet that need, following the introductory section which provides important background information. The book's contents are organized into 4 sections that correspond to the core needs and interests of emergency educators. Section 2 focuses on practical and ethical considerations of teaching in the ED. Section 3 provides strategies for teaching specific groups of learners. Section 4 looks at the skills that are characteristic of the best emergency educators, and section 5 looks in depth at specific teaching techniques and strategies. Now more than ever, this book addresses the needs of physician educators from all over the world. New chapters discuss lecturing to an international audience using simulation as a teaching tool, how to make journal club work for you, and other topics that are of broad interest to medical educators in this field. In general, each chapter has been updated and reviewed to make sure the content was something that emergency physician educators could use in any country. The chapter contributors are widely regarded as leaders in the field of emergency medicine education and faculty development. Authors were given free rein to develop their chapters and write in their own style. They were asked to present their personal views on how to successfully teach the art of emergency medicine rather than review evidence-based guidelines regarding medical education. As a result, most of the chapters have few references. This first-person approach to a multi-authored textbook yields a compilation that varies in style from chapter to chapter and exposes the reader to a variety of communication techniques.

The teachings of Paracelsus, Galen, Tibetan Tantras, and others all agree that a properly prepared individual can use nature to cure any illness. Samael Aun Weor, founder of the International Gnostic Movement and author of more than sixty books, lived for many years in close contact with the mysterious natives of the Sierra Nevada of South America. He and his wife Litelantes compiled and verified the knowledge they had been given by the priests and doctors of that region, resulting in this book. Esoteric medicine and practical magic. This practical manual gives hundreds of techniques and practices to awaken consciousness, perform healing for oneself and others, and return to the core medical knowledge of the ages. This work features treatments for an incredible variety of illnesses and conditions such as cancer, asthma, the common cold, and leprosy.
