Śraddhānjali to Āchārya K.R. Srinivasa Iyengar 2001

on the life and works of an indic english author

K.R. Srinivasa Iyengar 2008

this book is the first of 2 special volumes dedicated to the memory of gérard maugin including 40 papers that reflect his vast field of scientific activity the contributions discuss non standard methods generalized model to demonstrate the wide range of subjects that were covered by this exceptional scientific leader the topics range from micromechanical basics to engineering applications focusing on new models and applications of well known models to new problems they include micro macro aspects computational endeavors options for identifying constitutive equations and old problems with incorrect or non satisfying solutions based on the classical continua assumptions

Generalized Models and Non-classical Approaches in Complex Materials 1 2018-03-24

this book focuses on mathematical theory and numerical simulation related to various areas of continuum mechanics such as fracture mechanics visco elasticity optimal shape design modelling of earthquakes and tsunami waves material structure interface dynamics and complex systems written by leading researchers from the fields of applied mathematics physics seismology engineering and industry with an extensive knowledge of mathematical analysis it helps readers understand how mathematical theory can be applied to various phenomena and conversely how to formulate actual phenomena as mathematical problems this book is the sequel to the proceedings of the international conference of continuum mechanics focusing on singularities comfos 15 and comfos16

Gerard Manley Hopkins 1948

in this book samohýl and pekař offer a consistent and general non equilibrium thermodynamic description for a model of chemically reacting mixtures this type of model is frequently encountered in practice and up until now chemically reacting systems out of equilibrium have rarely been described in books on non equilibrium thermodynamics readers of this book benefit from the systematic development of the theory this starts with general principles going through the applications to single component fluid systems and finishing with the theory of mixtures including chemical reactions the authors describe the simplest mixture model the linear fluid and highlight many practical and thermodynamically consistent equations for describing transport properties and reaction kinetics for this model further on in the book the authors also describe more complex models samohýl and pekař take special care to clearly explain all methodology and starting axioms and they also describe in detail applied assumptions and simplifications this book is suitable for graduate students in chemistry materials science and chemical engineering as well as professionals working in these and related areas

Ruskin Bond of India 2008

this book presents important recent applied mathematics research on environmental problems and impacts due to climate change although there are inherent difficulties in addressing phenomena that are part of such a complex system exploration of the subject using mathematical modelling is especially suited to tackling poorly understood issues in the field it is in this spirit that the book was conceived it is an outcome of the international indam workshop mathematical approach to climate change impacts mac2i held in rome in march 2017 the workshop comprised four sessions on ecosystems hydrology glaciology and monitoring the book includes peer reviewed contributions on research issues discussed during each of these sessions or generated by collaborations among the specialists involved accurate parameter determination techniques are explained and innovative mathematical modelling approaches presented the book also provides useful material and mathematical problem solving tools for doctoral programs dealing with the complexities of climate change

Accessions List, India 1978-08

the aim of the school on rheology of complex fluids is to bring together young researchers and teachers from educational and r d institutions and expose them to the basic concepts and research techniques used in the study of rheological behavior of complex fluids the lectures will be delivered by well recognized experts the book contents will be based on the lecture notes of the school

self portrayal has become an integral part of modern culture and india equally shares this universal mood a large number of indians have committed themselves to the writing of their autobiographies in english as well as in the regional languages it is exciting to know that those in english have been produced by some of the finest minds of the country such as raja rammohun roy lal behari day surendra nath banerjea bipin chandra pal lala lajpat rai mahatma gandhi rabindranath tagore jawaharlal nehru subhash chandra bose p c roy s radhakrishnan sachchidanand sinha and nirad c chaudhury it is highly fascinating to read their testimony in the shaping of modern indian history even more exciting are the glimpses into their private lives and the interrelation between the portrait and the man this study is the first

comprehensive attempt to critically evaluate these works and shows how in modern times indians begin to get over the proverbial indian inhibition in talking of private affairs hesitatingly first and then with a devastating even embarrassing frankness this study in passing also tries to dispel the impression that no autobiographical tradition existed in ancient and medieval india

structural geology is a groundbreaking reference that introduces you to the concepts of nonlinear solid mechanics and non equilibrium thermodynamics in metamorphic geology offering a fresh perspective on rock structure and its potential for new interpretations of geological evolution this book stands alone in unifying deformation and metamorphism and the development of the mineralogical fabrics and the structures that we see in the field this reflects the thermodynamics of systems not at equilibrium within the framework of modern nonlinear solid mechanics the thermodynamic approach enables the various mechanical thermal hydrological and chemical processes to be rigorously coupled through the second law of thermodynamics invariably leading to nonlinear behavior the book also differs from others in emphasizing the implications of this nonlinear behavior with respect to the development of the diverse complex even fractal range of structures in deformed metamorphic rocks building on the fundamentals of structural geology by discussing the nonlinear processes that operate during the deformation and metamorphism of rocks in the earth s crust the book s concepts help geoscientists and graduate level students understand how these processes control or influence the structures and metamorphic fabrics providing applications in hydrocarbon exploration ore mineral exploration and architectural engineering authored by two of the world s foremost experts in structural geology representing more than 70 years of experience in research and instruction nearly 300 figures illustrations working examples and photographs reinforce key concepts and underscore major advances in structural geology

Religion, Peace and a New World Community 1978

explores how far subhas s philosophy of life was influenced by aurobindo s terrorism tagore s universalism and gandhi s experimental non violence shows how subhas discovered gaps in their ideals and how with his analytical intellect he formulated his action plan to force britishers to quit india

The Thermodynamics of Linear Fluids and Fluid Mixtures 2013-11-19

this book presents a series of challenging mathematical problems which arise in the modeling of non newtonian fluid dynamics it focuses in particular on the mathematical and physical modeling of a variety of contemporary problems and provides some results the flow properties of non newtonian fluids differ

in many ways from those of newtonian fluids many biological fluids blood for instance exhibit a non newtonian behavior as do many naturally occurring or technologically relevant fluids such as molten polymers oil mud lava salt solutions paint and so on the term complex flows usually refers to those fluids presenting an internal structure fluid mixtures solutions multiphase flows and so on modern research on complex flows has increased considerably in recent years due to the many biological and industrial applications

Tryst with the Divine 1974

this book it is hoped will create in the readers not only an interest in sri aurobindo s literary work but also an awareness about his message of integralism and its continued relevance for all times

Sri Aurobindo's World-vision 1976

the greek menander said that they whom the gods love die young and many have been the inheritors of unfulfilled renown perhaps none of them was so unique as toru dutt frail and delicate since birth brought up by a doting father who lavished every care and attention on her born in a hindu family but converted early to christianity fed on hindu myths and legends acquired both through books and through oral tradition educated in europe and longing to return to england attracted towards the end of her life by sanskrit and devoting weary hours to its grammatical intricacies writing in french and english but not in her mother tongue publishing works in both these languages leaving behind with those who knew her the fragrant memory of an exceedingly charming personality dying before she was twenty two toru dutt is one of the most poignant examples of those who before their proper time pass through the door of darkness

Mathematical Approach to Climate Change and its Impacts 2020-03-16

the present book seeks to bring out the contours of the indian novel with a social purpose which has stuck deep roots in the indian soil by imaginatively treating the contemporary problems and artistically exploring and interpreting india in all its variegated aspects it shows how the indian english novelists who are inspired by the vision of a just social order portray powerfully the real grandeur of the poor and the down trodden and their yearning for a just humane indian polity divided into two parts the book covers both the indian novels originally written in english and the indian novels originally written in regional languages and translated into english if the first group of the novels depicts the political economic and social oppression of the individual the second group centers on the individual s search for identity this book is expected to be of considerable interest and use to the teachers as well as the students of indian english fiction

Rheology of Complex Fluids 2010-09-20

this book is a collection of 640 plus multiple choice type questions with elaborated explanations and analysis based on the latest examination patterns this book has been written to cater the present needs of the tgt pgt nta ugc net jrf set aspirants

Dawn to Greater Dawn 1975

this book will be an interesting and useful guide to the students of indo anglian poetry it identifies some recurring symbols in the poetry of sri aurobindo traces their development and their final culmination into savitri it also shows how the poet sri aurobindo had grown along with his symbols and evolved himself finally into a yogi sri aurobindo is in the long line of the seer poets of india and his message has an all time relevance to society

analyzing the ways in which ideas of heroic discourse and the socio religious and political needs of the period moulded iconography this book explores the evolution of the iconography of the early mediaeval hindu temples of the indian peninsula over the course of the sixth twelfth centuries c e in order to study the socio religious and political atmosphere in which the early mediaeval temple iconography grew and developed its specific forms the author makes use of the inscriptions archaeological and the literary materials ranging from the fourth centuries b c e to the thirteenth century c e as these give an idea of the continuities and discontinuities in the ideas of heroic and political discourses which lie at the back of the visual art forms that they created of particular interest are the royal charters issued in sanskrit and tamil the religious narratives from the sanskrit epics and the puranas iconographic canons that form a part of the religious texts known as the agamas written in sanskrit the court literature of the early mediaeval period and the early historical sangam tamil literature apart from the archaeological material from the indian peninsula the author focuses particularly on exploring the ideas of power current in the society that created the narrative iconography of the period and the region studied

Introduction to the Study of English Literature 1984

this book constitutes the refereed proceedings of the 16th international conference on intelligent data engineering and automated learning ideal 2015 held in wroclaw poland in october 2015 the 64 revised full papers presented were carefully reviewed and selected from 127 submissions these papers provided a valuable collection of recent research outcomes in data engineering and automated learning from methodologies frameworks and techniques to applications in addition to various topics such as evolutionary algorithms neural networks probabilistic modeling swarm intelligence and

objective optimization and practical applications in regression classification clustering biological data processing text processing video analysis ideal 2015 also featured a number of special sessions on several emerging topics such as computational intelligence for optimization of communication networks discovering knowledge from data simulation driven des like modeling and performance evaluation and intelligent applications in real world problems
